WHY THE NEED FOR NON-SPARKING TOOLS

The recommendation is to use GEDORE non-sparking tools in all areas where combustible or easily ignitable vapours, liquids and dusts are; as well as where there is potential for fire or explosion caused by sparks.

- Made either from proven, low-sparking special bronze and copper/beryllium alloys or from other non-spark inducing materials.
- The spanners are cast and not forged for your own safety.
- Corrosion resistant, even against salt water.
- Copper/beryllium tools are non-magnetic.
- Non-sparking tools are not as hard as conventional ones and must be used with care.
- Using non-sparking tools must not be the only protective measure taken in areas of fire or explosion risk.
- It would be more accurate to refer to 'low spark' since ignitable sparks cannot be 100% prevented with the use of non-sparking tools.
