

BURNING A BOOTABLE CD OR DVD USING POWERISO

Edit an existing image file or create a new image file.

1. Choose menu item {"Action" --> "Boot" --> "Add Boot information"} to add boot information to current compilation. The "Add Boot Information" dialog will pop up.
2. You need add the boot information from one of the following source,
File: A floppy disc image file or a boot information file extracted from bootable image file.
Floppy Drive: Select the floppy drive containing bootable disk. Edit current compilation if necessary.
3. When you have finished editing, insert a blank CD, DVD disc in the burning drive, then click "Burn" button on toolbar to burn current compilation to the disc. You may also save current compilation to an ISO file.
