1. FALLS WITH INJURIES

Inpatient

- Majority of the units outperform the benchmark (all hospitals mean) the majority of the time.

Outpatient:

- Majority of the units outperform the benchmark (all hospitals mean) the majority of the time.

2. HOSPITAL ACQUIRED PRESSURE INJURIES STAGE 2 AND ABOVE

- Majority of the units outperform the benchmark (all hospitals mean) the majority of the time. 4/5

Opportunity: 5N

5North:

2 Quarters that do not outperform will drop off in the next 2 quarters.

Action Plan: Debbie Reynolds will work with her wound care resources and create a re-education plan highlighting the new skin care products, new beds, new heel booties, focus on prevention of device related wounds

3. CENTRAL LINE BLOOD STREAM INFECTIONS

- Majority of the units outperform the benchmark (all hospitals mean) the majority of the time. 5/5

ICU had infection 4th Q '17 – was there in intervention that we could use for a Magnet component if the rate trends down? - Possibly addition of chlorhexidine to the bundle?

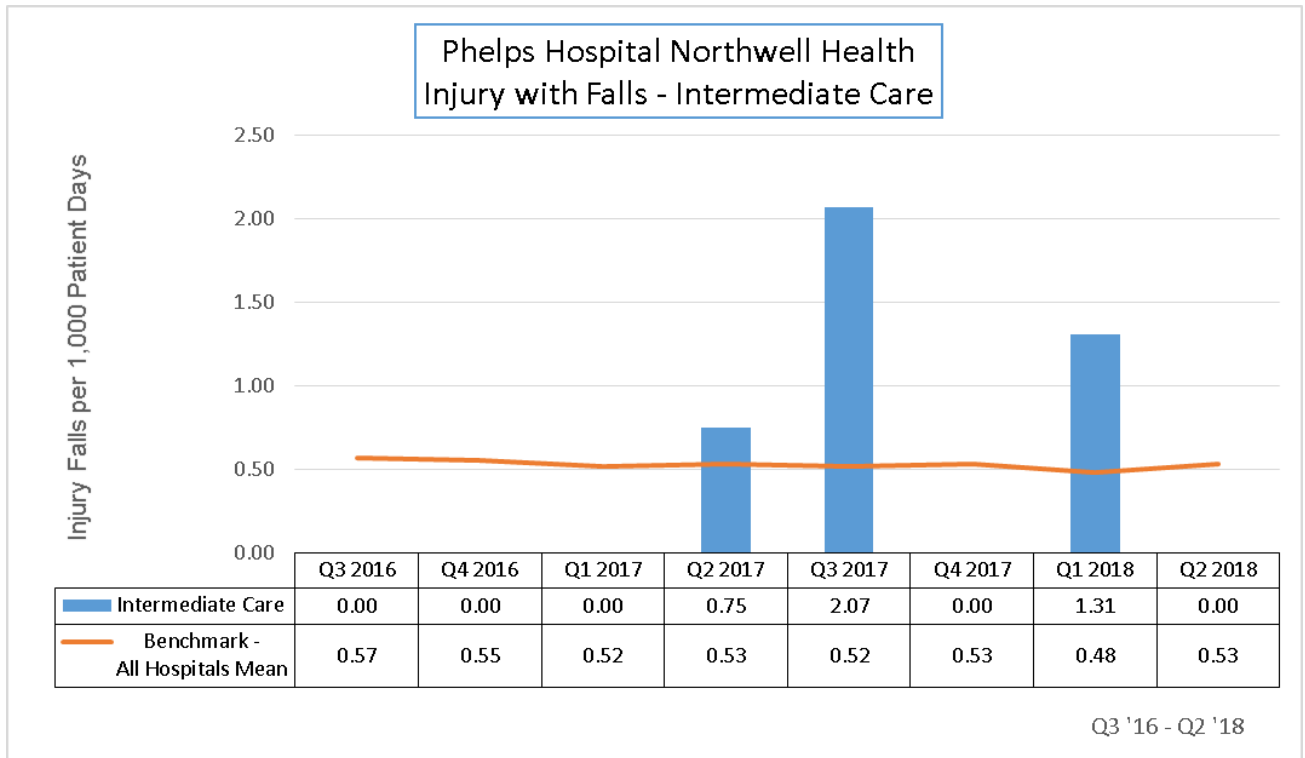

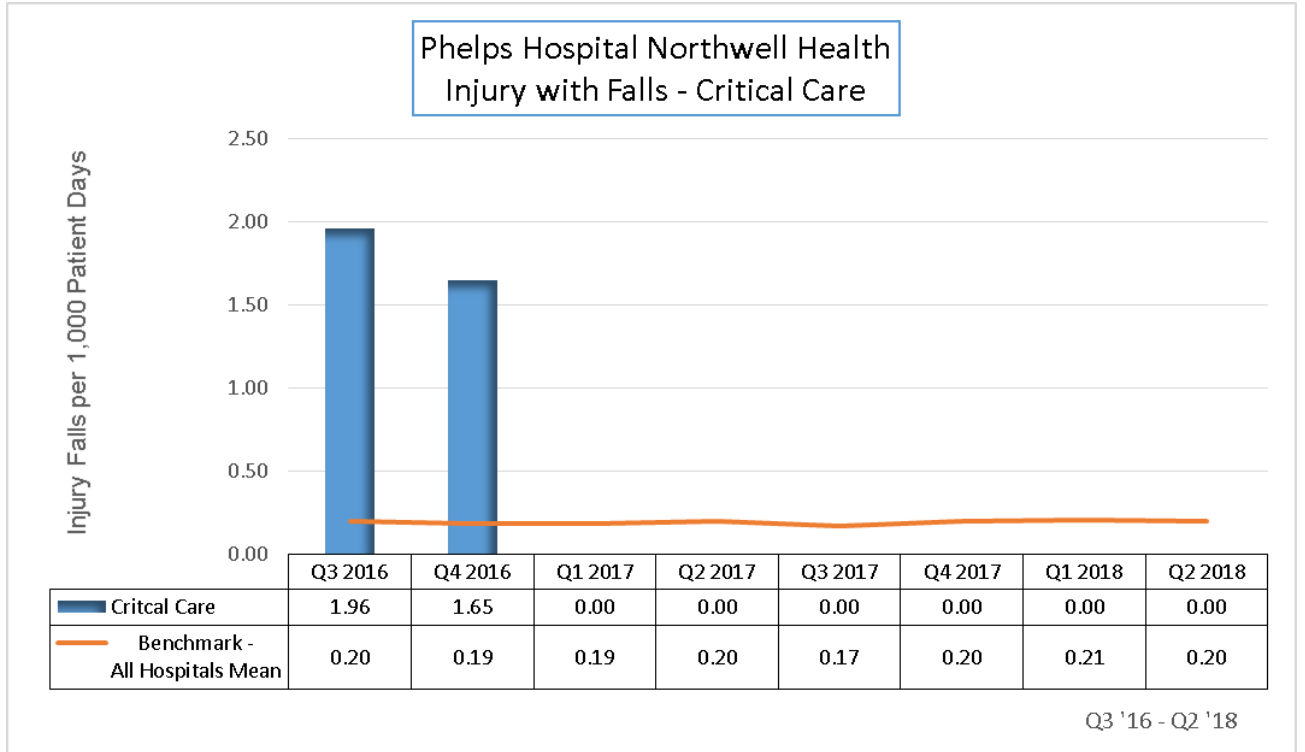

5North had 1 CLABSI in 2nd Q '18. - Maybe we could drill down to see how/why and create an intervention?

4. CATHETER ASSOCIATED URINARY TRACT INFECTIONS

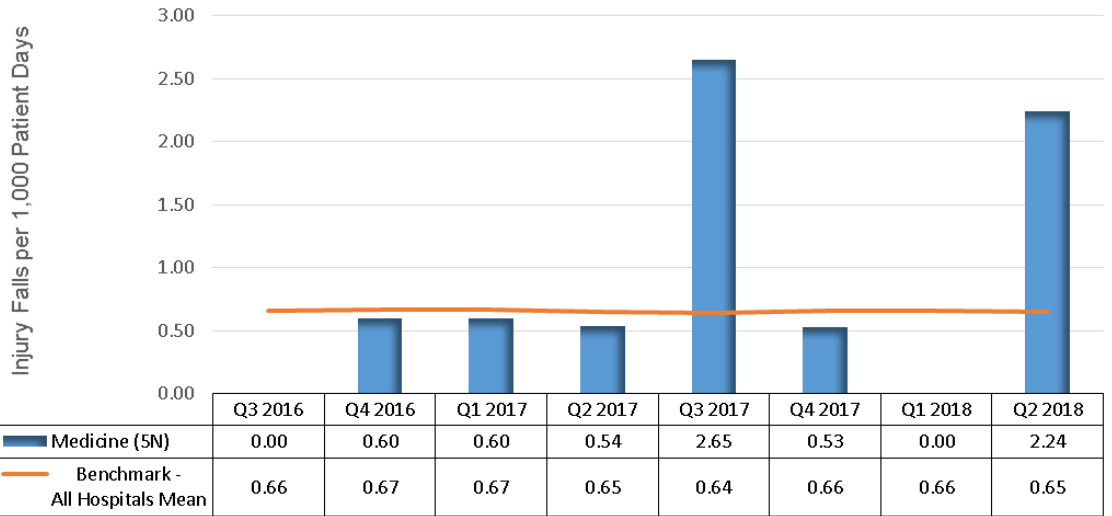

- Majority of the units outperform the benchmark (all hospitals mean) the majority of the time. 5/5

In 2nd Q '18 dropped PEDs from the denominator for the inpatient unit since the majority of the quarters are No Data. Will still update and track and add back to the counts if eligible.
