17. In the past year, were you ever in a situation where you felt you could have been better prepared? If so, describe the key points.

Sum of RESPONSES

Row Labels

NA/None

Nurse to patient ratios. there have been times where I had 7-9 patients and was not prepared for that workload

Receiving pts from the ER or the PACU without sufficient MD orders placed.

observing nurses crumble due to lack of support, leadership and resources

COVID PANDEMIC IN ITS ENTIRETY

Discussing with family members regarding patients plan of care

continuing education

whenever it is so busy with so many patients that I can't manage the amount of work for the time available

Pediatrics

yes, educational classes help

Covid

Yes, being floated to other units is something that is something i wish i was more prepared for

Covid 19 ICU RN experience at another hospital the nursing leadership was fractured.

every Thursday, Friday very busy and staffing

being sent to take care of ICU/vented patients during COVID with no training

yes, when the manager asks you questions about why you called out even though you have intermittent FMLA

blood transfusion

Yes, I feel that during hemorrhage situations, the process of obtaining blood products is time consuming. Calling blood bank, getting on computer, putting in the order, NEPsing the package, filling it out, faxing to blood bank, going to pick up.... requires extra hands that we don't have to spare.

Healthy Workplace Environment Principles

Yes, Dealing with new employees who's orientation did not cover all that is required of their job During the first few weeks of the pandemic I felt like I could have used some more direction however I do feel that we made the best of an unfortunate situation.

Yes, during Covid surge. The mental and emotional effects that no one was prepared for.

learning the phelps culture and workflow vs. my other work environment, having a tour of the facility during orientation (outside my own department)

new neuro procedures

During the Covid crisis.

ADD ON OR CASES THAT PACU WAS NOT INFORMED OF. NEED FOR BED ASSIGNMENTS FOR DISPOSITION OF POST OP PTS AND SUPERVISOR UNAWARE THAT PT HAD COME TO OR.

covid.....NMB agents/titration/PNS monitoring; vent weaning

neurological

Code blue response - particularly during COVID

PHELPS HOSPITAL NORTHWELL HEALTH - 2020 LEARNING NEEDS ASSESSMENT

I feel like we receive a higher level of education as it regards to training and preparedness for our roles here at Phelps. There have been situations were if we had more staffing I feel like the outcomes would have been better for the patients and the nurses.

The Pandemic situation.

yes my boss is aware

I think we could of been better prepared for Covid-19. We are now provided educational material for medications, PPE, Oxygen, and Quarantine.

The entire Covid experience was an exercise in poor preparation

for covid 19...

Having adequate staffing

yes, mainly when receiving report from disinterested nurses.

During rapid response, not been able to perform EKG in urgent situation.

COVID pandemic - As a mental health/psychiatric nurse, it was frustrating to be put in situations where I may not have been as helpful as I would have liked. While I am a nurse, there are some functions that I was not prepared for, and could not be refreshed on during the height of the pandemic, when I was scheduled on the medical units.

Being sent to the Covid Floor

COVID surge, low PPE supplies

AS A NEW NURSE I'M STILL GROWING SO THERE IS ALWAYS ROOM FOR GROWTH

Yes, my patient had a postpartum hemorrhage on my first night off of orientation. I felt unprepared in locating the medications/hemorrhage kit and supplies, and knowing which medications to administer at the correct doses. It was also my first experience with PPH, so I felt unable to act as quickly as I should have. I have since reviewed this information with colleagues, and feel a little better prepared to act should the situation arise again.

Psych overdose users and their competency on signing out AMA

I am new to telemetry so I still don't feel well prepared for anything.

People undermining you behind the scenes and how to deal with working in a toxic environment Yes when we were deployed to other units during the increase of covid patients the daily management of systems in relation to the disease was challenging to know what treatment was helpful. Having more knowledge of the drugs and interactions were needed for self knowledge.

we could always learn more

NO. I had a great experience, I had a patient with a wound and I learned a lot from Debbie Reynolds. Now I am interested in becoming a wound champion .

transforming negative interpersonal dynamics on unit

I was sent to ICU without any training/experience. I would have preferred a heads up, a phone call or notice the morning of. I was out with COVID and when I returned I was sent to ICU. I have no prior critical care experience.

when rules/policies change there is not a clear, organized rollout of information prior to starting changes

when COVID hit.

yes, info on new oncology medication

Yes

Need more time

10 | Page

PHELPS HOSPITAL NORTHWELL HEALTH - 2020 LEARNING NEEDS ASSESSMENT

Having to work as a healthcare worker during the pandemic. I was not prepared for the emotional distress we would all endure. However I remained resilient

Improved knowledge of AEHR work flow and documentation. Infection Control and JCAH standards Pandemic. I think it would have been helpful to be informed on the strategic planning our leadership was preparing for prior to the Pandemic.

In March - April of 2019, caring for Covid patients.

when it got busy felt overwhelmed when seeing others needing help

I had never considered traffic during typhoons a factor that made me late for work until I experienced being slowed down by non-working traffic lights because of typhoon. I adjusted more time window for myself to coming to work.

At the start of COVID pandemic, more clarity on expectations of patients and expectations of staff.
