

Chasing Zero CAUTI Program Development Quality & Safety April 2021

Infection Prevention

Why Change the Culture Around Devices?

	2018	2019	2020	2021
CAUTI Events	0	5	10	3

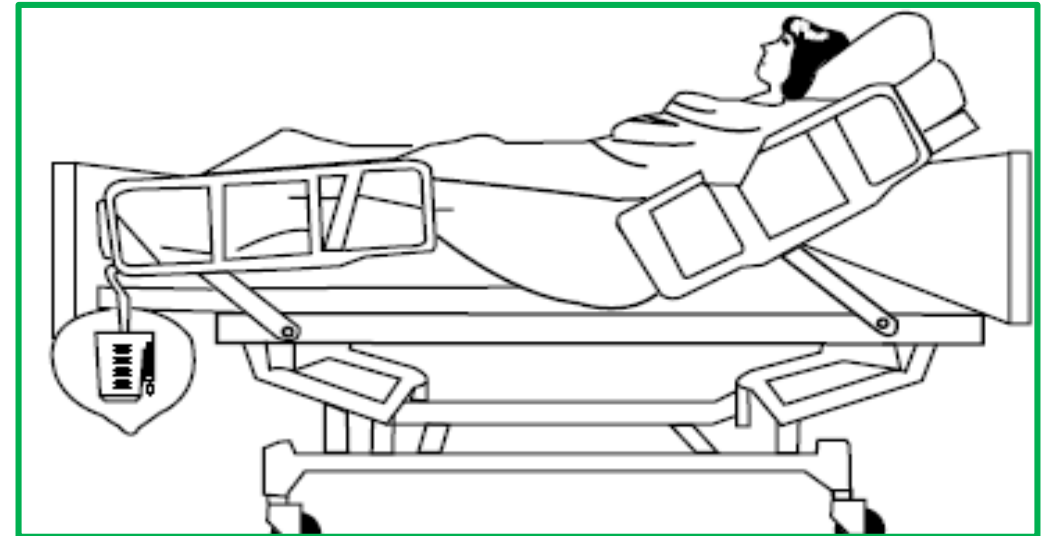

1. Better patient outcomes with Best Practice
2. Decreased LOS
3. Reputation-“Star Rating”
4. Financial Penalties – Value Based Purchasing

Appropriate Indications

- ICU: Hemodynamically Unstable
- Sacral Decub- Stage 3 and up
- PeriOp Period
- Multiple Trauma and Prolonged Immobility
- End of Life Comfort Care
- Retention/Obstruction
- GU Surgery/Procedure
- Continuous Bladder Irrigation
- Intravesical administration treatment

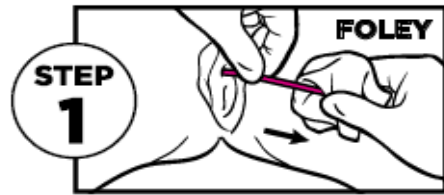

Best Practices in Maintaining Indwelling Catheters

- Continual Reassessment of Need
- Avoid Dependent loops and kinks- use **GREEN CLIP** and hang at the **FOOT of the BED**
- Keep bag lower than the bladder and off floor always
- Use STATLock and keep a closed system
- Empty Bag prior to patient transport

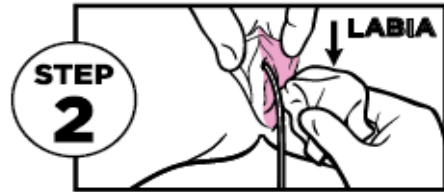

After Peri Care- Hand Hygiene and then Catheter Care EVERY SHIFT and AFTER EVERY PERI CARE

FEMALE PROCEDURE

Start at the meatal junction, gently cleanse the first 1-2" of Foley then stabilize Foley with non-dominant hand while cleaning the remainder of the catheter to the bifurcation.

Clean meatus and distal (far side) labia

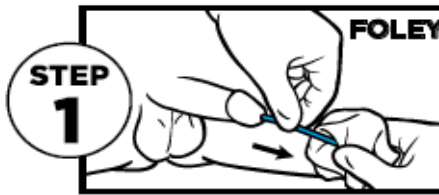

Clean proximal (nearside) labia

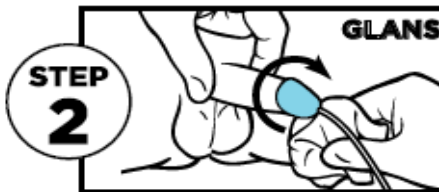

Clean each inner thigh with a separate cloth in a downward motion

MALE PROCEDURE

Start at the meatal junction, gently cleanse the first 1-2" of Foley then stabilize Foley with non-dominant hand while cleaning the remainder of the catheter to the bifurcation.

Clean meatus and glans

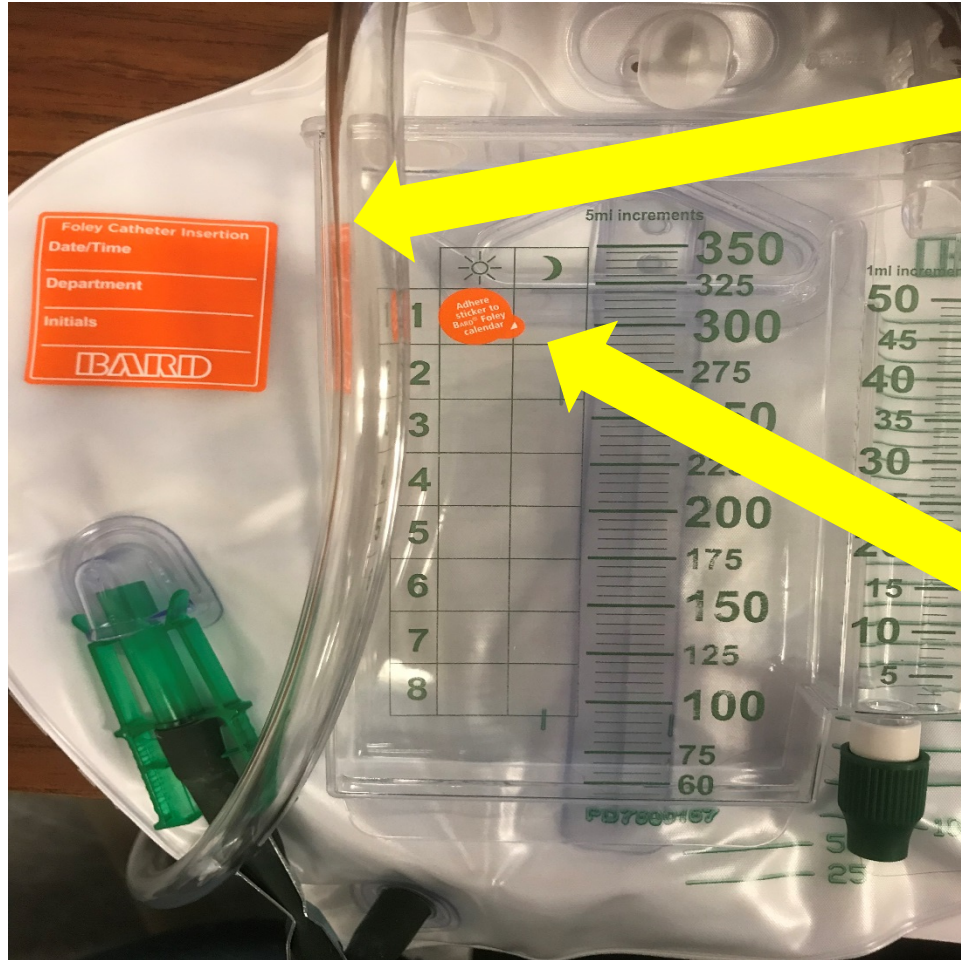

Clean shaft and scrotum

Clean each inner thigh with a separate cloth in a downward motion

Discard soiled wipe in bedside trash receptacle after each step

Catheter Care Stickers

- **Indwelling Catheter Insertion Sticker with:**
 - Date
 - Time
 - Initials
 - Department
- **Indwelling Catheter Care round stickers:**
 - Applied once a shift verifying catheter care was completed
 - Under the sun or the moon
