
WSK1030 - Industrial Windsock Kit stainless & collapsible

Description:

Windsock WSK1030 is used for visual determination of the wind direction and is designed for outdoor use during daylight.

Wind cone made of non flammable & water repellent synthetic fabric orange color with white fluorescent strips. Wind cones are reinforced at all points that are subject to abrasion by flexing against the metal frame work and can be replaced without use of special tools or stitching.

Windsock frame is made of stainless steel and it is collapsible. The supported wind shoulder prevents the cone from twisting around the mast as well as prevents water accumulation in the windssock and increases cone's sensitivity to light winds to attain the shape of a truncated cone and indicate true direction faster. Smooth rotation of the wind indicator by 360 degrees is provided by the use of a sliding bearing.

Mast is not included.

Specification:

- Cone length (cm/inch) 76cm / 30inch
- Cone throat Din (cm/inch) 25cm / 10inch
- Cone throat Dout (cm/inch) 12cm / 5inch
- Cone color Orange with white fluorescent strips
- Frame material Stainless steel

Conditions of use

- Temperature: -50C/-58F to +70C/ 158F
- Wind speed up to 50m/s / 112mph

Packing:

- Corrugated box – 300x300x50mm. – 1 piece.
