

Trendz Product of the Quarter

All on X

All on X cases are becoming more and more abundant. Our lab has successfully and efficiently completed many. Paul handles all the All on X cases. From the beginning stage to the end, you can expect consistent, and detailed work. We ensure your patient will have the best comfort from temporary to final. It is our #1 goal.

These cases are a fixed long spanning bridge supported by 4 or more implants. There are many steps to completing this full arch prosthesis. All in all, the process goes relatively smooth, and patients gain so much confidence.

With an All on X your patient can expect to eat normally, have a natural looking smile, and the luxury of not having to wear dentures.

Simpson Dental Trendz is always willing to case plan with you.

Featured Dentist of the Quarter

Dr. Trisha Halford, DDS

Dr. Halford has enhanced her skills and provided numerous patients the smiles they deserve. Her impressions are clean, her expectations are high, and her work is remarkable. Below she will tell you a little bit about her and her practice.

“I have a general dentistry practice in Prairie Village, KS. For the past 5 years my focus on comprehensive dentistry has greatly expanded. I am a bit of a CE junkie! I love learning and expanding my knowledge to bring my patients the best, most predictable care possible. I am passionate about what I can provide for patients and the impact that it can have on their lives.”

Working with Dr. Halford has been nothing but a pleasure. We hope we can help her achieve everything she desires.

Upcoming Events

Midwest Dental Conference

We hope to see you there!

Important info

Material prices have gone up...

We have not increased our fees; however, all precious alloy cases are based on market price. If you see an increase just know that is why this has occurred. For now, we are trying to keep cost down to prevent increasing our prices.

Tips

Make sure you send all that is needed for all your cases.

We always will want an upper, lower, and a bite. All implants we will want to know the implant specifics, we will want the impression copings as well. Providing all of this will help prevent delays and ensure that the case is being handled in the manner it needs.

The employee every dental lab needs. It's the stand-alone employee. No call ins, never sick, reliable, and on time ALWAYS! This 35-puck holding beast of a machine has so many fancy bells and whistles. From self-cleaning to self-changing. This machine can run day and night. As long as you have pucks and work CAM'd up this mill will stay late to make sure it all gets done.

You can mill everything; Zirconia, PMMA, Wax, Metal-Less Denture Frames, overdenture bars, Ceramic Blocks, and even Titanium. On top of that, you can control it from ANYWHERE.

This Mill doesn't stop there. Being able to bounce between wet and dry milling is a big bonus. Imagine a mill that can literally do this without you lifting so much as a finger. It's here, it's real, and that's why we have one.

Here at SDT we try to stay up to date on the newest machines so we can provide you the best service we possibly can. This is one of the newest machines we have in the office.

Simpson Dental Trendz

About our Team

Life at the lab

Paul Simpson opened his lab in 2012. He has spent every day since growing with the industry and growing his lab.

Here at SDT we have 24 employees and the best lab dog. We function as a unit not as individuals. We all have important duties to adhere to prevent any issues as your cases move through the lab.

Our removable department is made up of 4 technicians with a combined 48 years of experience. They work hard and are very detailed with their work.

Cad/Cam is made up of 4 employees with a combined 61 years of experience. They are learning and making strides to make more things possible from a digital standpoint.

Our ceramist department is made

up of 5 employees with a combined 154 years of experience. They are probably the spunkiest group here at SDT. They work hard and make sure they are having fun the entire time.

The model department is made up of 2 employees with a combined 6 years of experience. Those girls keep their heads down and work to ensure your cases get moved through the lab as quick as possible.

Our office girls and delivery guys have been in the dental industry for a combined 75 years. There are 6 employees that fall in this category.

We are very much a family here at SDT and we love spending every day working together to grow a better lab and grow ourselves as individuals.

Arts of a Dental Technician

Ezthetic line

SDT presents a new line of Ezthetic!

Paul Simpson has honed in on his craft of being a highly respected anterior ceramist. His eye for detail helps Doctors achieve the high expectations of their patients. He works closely with both patient and Doctor to ensure all details are obtained for the final product.

Every office has those special cosmetic cases where a patient is picky and desires nothing but the best. Paul came up with the Ezthetic line to assist on those cases. We too feel your patient deserves nothing but the best.

With us we ensure that we will forever be there for your ezthetic needs.
